

ServiceNow Client Scripts – Outputs

1. Output of onChange Client Script – Auto Set Urgency

When the Impact field is changed to High, the Urgency field is automatically set to High.

```
Impact:   High
Urgency:  High
```

```
Information Message:
Urgency set to High for High impact incident.
```

2. Output of onSubmit Client Script – Validate Assigned To

When Impact is High and Assigned To is empty, the Incident cannot be saved.

```
Impact:      High
Assigned To:  Empty
```

```
ERROR:
Assigned To is mandatory for High impact incidents.
```

```
Result: Incident record is NOT saved.
```

Successful submission when Assigned To is filled:

```
Impact:      High
Assigned To:  Selected User
```

```
Result: Incident record is saved successfully.
```

3. Output of onCellEdit Client Script – Prevent State Change

When a user attempts to change the State directly from the Incident list, the change is blocked.

```
Attempt: Edit State from Incident List
```

```
Alert:
State cannot be updated using list editing. Please open the Incident.
```

```
Result: State value remains unchanged.
```

4. Overall Expected Output

```
Impact = High
↓
Urgency automatically becomes High
↓
Urgency becomes Read-Only
↓
Assigned To must be filled before saving
↓
State cannot be changed through list editing
```
